Night Operations

Module Cost \$249

Night navigation requires skill and concentration and should not be taken lightly. Many things change on the water after daylight. While on your boat at night, your depth perception decreases and distances and sizes of shores and navigational aids can look different. Waves become harder to see and judge and reflections in your boat's windshield can be confusing.

Night Operations provides the foundation to safer operation after dark. You will learn the minimum USGC equipment required to safely operate at night as well as how to prepare your vessel *in advance* to reduce your workload once out on the water. Navigational markers will appear differently than they do in the light of day, your depth perception becomes adversely affected as does your decision processes. You will be taught how to interpret the movement of surrounding vessels by their navigational lights and pick out key markers in a sea of background city lights.

Boating at night can be rewarding and tension free if you take the time to become proficient in the nuances of this darkened realm.
